Interpretation:

Combined Paternity Index: **67,107**

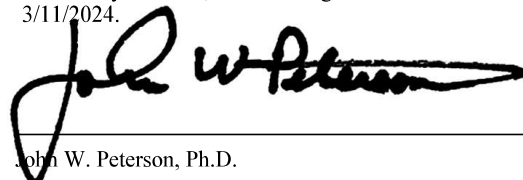

Probability of Paternity: **99.998%**

The alleged father is not excluded as the biological father of the tested child. Based on testing results obtained from analyses of the DNA loci listed, the probability of paternity is 99.998%. This probability of paternity is calculated by comparing to an untested, unrelated, random individual of the general population (assumes prior probability equals 0.50).

RN: 11068770

Note: Since the samples were not collected under a strict chain of custody by a third neutral party and the Laboratory cannot verify the origin of the samples, this test result may not be defensible in a court of law for the establishment of paternity and other legally related issues. The tested parties' names that may appear on this report have been provided by the client and cannot be verified. The laboratory assumes no responsibility for incorrect or misspelled patient information.

Based on the samples received from the tested parties whose identities cannot be independently verified, I, the undersigned Laboratory Director, declare the genetic data is correct as reported on 3/11/2024.

John W. Peterson, Ph.D.
